

qStudio

qStudio is an intelligent code editor for Kdb that provides:

- [q Syntax Highlighting](#)
- [q Code Completion](#)
- Ability to [Query Servers](#) direct from the editor
- [Server Browser](#) for visually viewing a servers objects
- [Charts](#) for displaying your data

A free version is available to download from the website now: www.timestored.com/qstudio

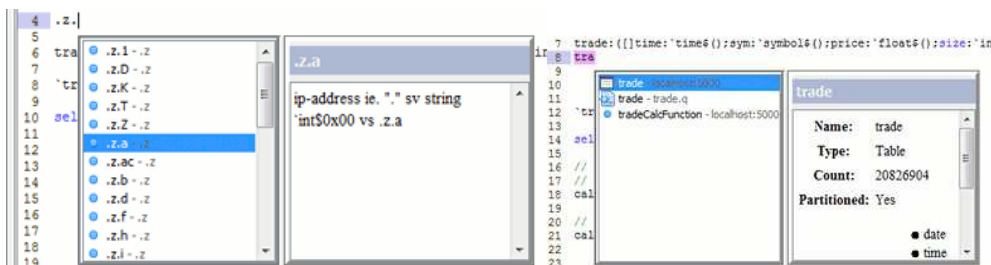

q Syntax Highlighting

Keywords, SQL syntax, numerical values, comments and quoted text are highlighted appropriately.

```
trade.q x | circ.q
1 / create initial table
2 trade: ([]time: `time$ ();sym: `symbol$ ();price: `float$ ();size: `int$ ())
3
4 `trade insert [09:30:00.000; `a;10.75;100] / first record
5
6 select sum size by sym from trade
```

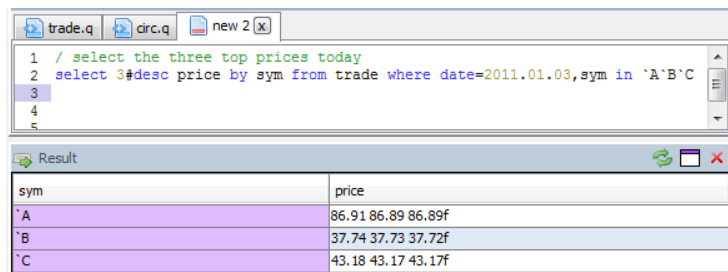

q Code Completion

Code completion of built-in functions, server variables and variables in files.

Query Servers

Send queries straight from within the editor to your servers. Kdb specific structures are handled perfectly.
